

A Proud Service Disabled Small
Business

Maven History

The Maven Group is a Service Disabled Veteran Owned Small Business specializing in providing Recruiting and Consulting Services, to its corporate and government clients. The company was founded in September 2003 just outside of the Research Triangle Park in Chapel Hill, North Carolina by Frank DeGeorge and Jeff Walton. Both founders came from large corporate staffing backgrounds and decided that the higher level of service they wanted to provide their clients was difficult to achieve in a large company. They moved forward with plans to create The Maven Group with the purpose of serving both commercial and government clients in need of high quality, mission critical Information Technology and Engineering candidates for direct-hire, contract-to hire, and contract positions. The Maven Group is willing, flexible, and capable to assist in single direct recruiting assignments, as the staffing component of a large government bid, or as part of a client's desire to outsource their entire recruiting solution.

Since its inception, the company's primary focus is providing consulting and support services to clients to augment their information technology and engineering related initiatives. For corporate clients this includes, but is not limited to, providing consultants to support either their internal efforts or to support their efforts with their end clients. For Government clients and Government Prime Contractors this entails providing consultants and/or solutions based on the needs of the Government. Over the last 7 years, areas of focus have include providing high level, and highly skilled, consultants such as SAP, Oracle, Java, Database Administrators, .Net Programmers, ERP implementation expertise, Project Managers, Subject Matter Experts in various capacities, Unix and Windows Administrators, Network Engineers, CAD Developers, Aerospace Engineers, Advanced Telecom and Infrastructure Engineers.

The company's primary responsibility is to the client and to provide them with the most qualified candidate/consultant or best solution for the project. This is accomplished by ensuring that consultants are highly skilled in their disciplines and are capable of working with the client to accomplish the goals set forth by the client. Creativity is also a key ingredient which makes our service innovative. We can apply our recruiting and retention processes to many different types of skill sets enabling our customers to take advantage of our services within a host of industry sectors. Additionally, because we are a SDVOSB, our government focused clients are able to add us onto their government teams and achieve their small business goals very quickly by utilizing our services. This is an added benefit of course. While we are proud to be Service Disabled Veteran Owned, we like to think that we are good at what we do, first and foremost. That is why our clients hire us and retain our services in the end.

Core Capabilities and Past Performance Areas
